

Lead Funnel & Operational Efficiency Review

1. Executive Summary

The analysis of 100 leads shows an overall conversion rate of 16%. The biggest opportunities are improving lead response speed, increasing lead reachability, improving marketing efficiency, and ensuring better ownership tracking after qualification.

2. Key Findings

1. **Funnel Performance:** Not Connected is the largest pipeline blockage with 16 leads. Including uncontactable leads, 21 leads have contactability challenges, showing an opportunity to improve follow-ups.
2. **Marketing Efficiency:** Organic is the strongest source, generating 12 conversions from 41 leads (29.3%). Meta and Facebook generated 17 leads with zero conversions, while Google Paid converted 2 out of 30 leads (6.7%).
3. **Speed to Lead Impact:** Leads contacted within 15 minutes converted at 22.7%, compared with 9.5% for leads contacted after 30 minutes.
4. **Ownership Tracking:** 15 out of 16 converted leads remain outside Sales ownership indicating a potential CRM ownership or handoff tracking gap.

3. Recommended Actions

1. **Improve Lead Ownership Tracking:** Audit converted leads outside Sales ownership and implement stage-based routing after qualification.
2. **Improve First Response Process:** Introduce a 15-minute first-call target and test 12 PM to 3 PM as a priority retry window based on the observed 84.4% answer rate.
3. **Optimise Lead Acquisition Strategy:** Review paid channel lead quality and prioritise higher potential merchants such as 300+ order volume segments.

Timeline: Within 1 week

4. Conclusion

The analysis suggests that the immediate focus should be improving operational efficiency rather than only increasing lead volume. Better response discipline, stronger ownership control, and improved channel quality can help the company improve conversion performance.
